

HOW TO POWERPOINT

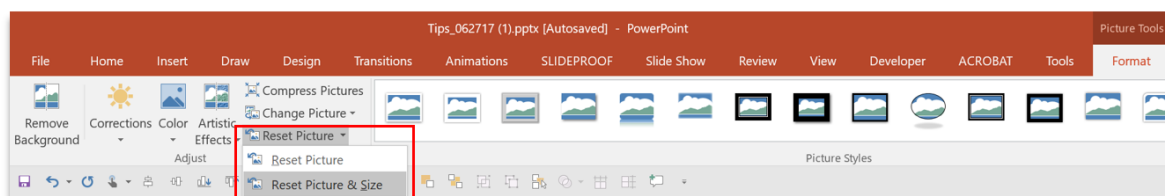

Is it me, or does that picture look strange? A little squished? A little stretched?

To fix any graphic that is out of proportion, right click on the graphic, choose **Size and Position** from the menu, and select **Reset** to return things to their original size.

Alternatively, under the **Picture Tools: Format** tab on the ribbon, click the arrow next to Reset Picture and choose **Reset Picture & Size**.

Did you like this "How to PPT" email?

Yes! - I would like more tips now!
